

Applications

- Continuous monitoring of compressed air systems
- Check drying efficiency in refrigeration and desiccant compressed air dryers to -60°C
- Check dew point in process, control and compressed air
- Check condensate deposit in refrigeration dryers
- Monitors desiccant dryers
- Monitors blow-by in liquid ring compressors

6740 Series

The 6740 Series incorporates a ±1% maintenance free humidity probe ideal for checking humidity measurements for validation of critical environments. It's rugged, compact and protected by a waterproof aluminum housing. The accuracy of this probe has been tested and proven time and again in worldwide laboratory tests. The probe is equipped with a patented capacitive polymer %RH sensor.

Benefits

Maximum reliability

- Long-term stability
- Demonstrably correct indication of measurement ranges and data
- Highest manufacturing quality
- Calculation of the most important trace humidity variables - e.g. °Ctpd, °Ctd atmospheric, ppm_v
- Calculation protocol

Convenient operation

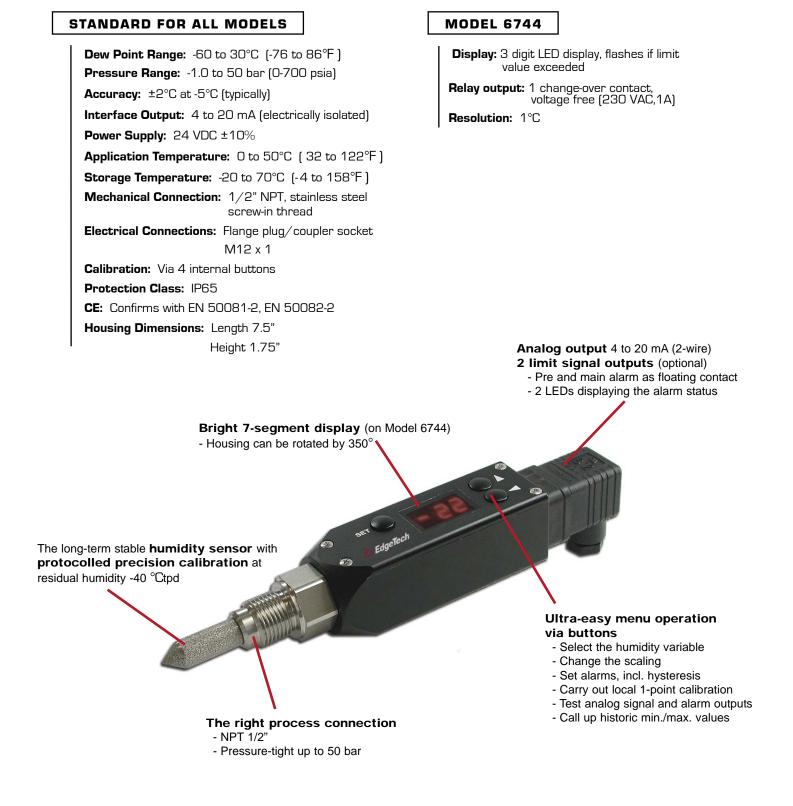

- Via the display menu without additional aids
- Without display via the internal interface and scaling adapter software - Local 1-point calibration
- Easy adjustment of limit values

Model 6744 with display

Model 6742 without display
